Ground Support Equipment

Safe access to roofs

Extra solid for extensive use

Custers Access Towers offer convenient access to roofs when materials have to be taken upstairs. The zigzag version with its minimized parts list offers a quick assembly of an access tower. The parallel version however offers more ease during assembly of the tower.

The Custers Access Tower is together with roof-edge protection and an accurate risk-analysis the ideal solution for temporary projects such as installation of solar panels!

Specifications

- Compliant to EN1004
- Platform length 2.5m
- To be assembled up to 8m platform height outside and 12m inside
- Inner guardrail and exit guardrail on the upper level
- Z-outside guardrails and "heavy duty" guardrails for the stairs
