

Aluminium Scaffolding

Service & Maintenance

Ground Support Equipment

Single and double sided assembly

The best way to work safely on chimneys and church towers!

The Custers Chimney scaffold offers a flexible solution: variation in platform length, platform height, roofing angle and extension possibilities.

You realize a safe working platform on the roof using the standard Custers scaffolding components with only 3 special parts (extension parts, ridge frame and base frame).

Combined with a mobile tower (including a platform carrying beam) a safe solution can be assembled for end-wall chimneys.

Specifications

- Safe and versatile
- Also applicable for end-wall chimneys
- Only a few special parts needed
- Made in The Netherlands
