

Aluminium Scaffolding

Service & Maintenance

Ground Support Equipment

Lightweight working platforms and stages!

Custers aluminium stages are ideal to bridge obstacles in places where scaffolding can't be erected. The aluminium stages come with one single guardrail, but are also available with a double guardrail.

The scaffolding stages can be used on both sides thanks to double claws with "blow away protection". The aluminium stage can carry heavy loads, has a sheetpile wall profiled floor decking placed crosswise, and a narrow-stripped replaceable floor decking.

Specifications

- Bridge between two scaffolds
- Available at a length of 4m, 5m, 6m, 7m or 7.5m
- Width: 0.7m
- The floor is an aluminium decking plate
- Maximum load: 200 kg/m²
- Stages have an integrated toeboard
- Handrail package can be mounted free from or fixed onto scaffold
