

Handy Mobile Tower scaffold

CUSTERS

St. Annapark Venray

Aluminium Scaffolding

Aerial Work Platforms

Ground Support Equipment

Proven top quality of Custers!

This mobile scaffold was specially developed for the most demanding industrial applications and the rental industry.

The perfectly stackable platforms with double sided wind securing pins are particularly user-friendly.

The rip-grip profile on the all around welded rungs ensure an optimal grip for safe climbing and handling during erection.

The solid end rings protect the frames against deformation. Besides this the castor wheels with spindle have a clever locking system that makes assembly and disassembly extremely user-friendly.

St. Annapark Venray

Specifications
